in project (Understanding Logic all Parts project)

- Participation in development concept product.

Achievements:

-Development of software for Automatic measurement volt-ampere characteristics on on Motherboard expansion PCI-9112 (ADLINK);

-A software provision in algorithm on C ++ language which can map expansion for Synchronization with external devices.
Software provision can measure Voltage and current in mode Real time with opportunity conservation Data in Microsoft Office Excel or opportunity conservation Data nA Web server in base MySQL;
-Created software provision for PC with to of exchange data Interfaces for COM and LPT;
-A algorithm for Search on Online PHP,
created e library. Created search-robot which enters all data in base Data SQL. Ability Automatic Authorization and registration;

- A Software for Mac OS Lion 10.7.1 , iPhone 4.3 iPad 4.3 in srere Xcode 4.1.

 - And Software written to work with bank payment systems.

Social network (high load)

Technology

PHP5 Zend framework,
MySQL (Master-Slave, partitioning),
NoSQL Local Storage,
jquery,
backbonejs,
OpenLayers.Map,
CSS (bootstrap , SCSS),
HTML,
Netbeans+android sdk, Sublime text, Wrkbench, SVN.

This project is designed for relaxation.

People can communicate with friends, share photos, publish text works …

B2B project

This is a B2B project is intended to account for the money. Implemented on the Zend framework .

Principle of operation.

each employee has a password and username (Zend ACL). Once an employee goes on a mission done acc record from SQL.

Upon return, the employee makes a record of what money is spent …

after which he was in a bank account is charged a certain sum ....

Technology , PHP5 Zend framework , Doctrine

MySQL , jquery , CSS, HTML

Apache , ubuntu , software development environment NetBeans, UbuntuOS

(high load php)

The project has been implemented using the MVC pattern.

MySQL number of tables used by about 100.

The maximum amount of myisam table was about 1 GB

front-end using jquery

The project used technology php curl to work with the Google API

(high load)

California (freelance)

This project is designed for relaxation.

a kind of analogue of YouTube with the only difference that the management is not a computer and a television.

Technology

PHP5 Zend framework, MySQL, Jquery, CSS, HTML5

Nginx + Apache, Ubuntu

I was responsible for the full realization (backend). (Except for the video processing in C ++)

Also been implemented Exchange for sale buy gold, silver ... (Has been implemented as a demonstration, test, training project)

Technology

PHP5, MySQL, Jquery, CSS, HTML5

Apache, (high load php)

Centre sovereign land cadastre of Ukraine

B2B Highload project is designed to control the land.

Technology

PHP5 Zend framework, MySQL, postgresql, Oracle, XSLT, CSS, HTML5, Jquery

Nginx + Apache, Ubuntu
